

Scaletec Plus® is both an alternative and an effective pre-treatment to an acid wash to restore pool surfaces

Background: Conventional acid washing of pool surfaces and mechanical tile cleaning has been employed for decades to remove calcium / mineral scale buildup on on pool surfaces and tile. The problem with these methods are potential damage to surfaces and tile due to harsh acids and cleaning methods.

New Technology: With the development of Scaletec Plus® calcium descaler and metal stain remover, traditional acid washes can now be preformed resulting in more thorough cleaning of the entire pool shell and equipment using less acid and cleaning time. When added one to two weeks before performing an acid wash, all pool surfaces, tile and equipment (*including the piping, filter unit, heater, solar unit and pool surfaces and tile*) are more thoroughly and easily cleaned.

Scaletec Plus® Alternative:

- Scaletec Plus® removes the same calcium scales, mineral deposits, and most metal stains as acid washing *and is much safer to handle.*
- Scaletec Plus® descales pool plumbing, heater, filter unit, pool vac, all valves, auto-filler, solar unit, plus salt chlorinator cell *and acid washing will not.*
- Scaletec Plus® will not etch, discolor, or damage pool surfaces; however, *strong acid washing can cause damage.*
- Scaletec Plus® is non-hazardous, safe to handle and non-toxic, *whereas acids are.*
- Scaletec Plus® will not pit or damage waterline tile, *strong acid washing can.*
- Scaletec Plus® does not require draining the pool, *strong acid washing does.*
- Scaletec Plus® descalers do not require any special equipment or added liability, *acid washing does.*
- Scaletec Plus® will continue to remove scale and stains when applied monthly, *an acid wash will not.*

New Approach With Scaletec Plus, you are able to offer your customers a more thorough pool restoration and cleaning alternative without excessive acid usage.
