

Why Starve? Prevent & Kill Algae!

ALGAE and **PHOSPHATES** have existed for billions of years. In the past, pool service techs kept pools clean and free of algae with just chlorine, pH control and with an occasional algacide. In recent years, flocculation removal of phosphates and other suspended pool particles have become useful under certain conditions to improve chlorination and the control of algae.

Did you know, it is nitrogen, not phosphates that produce lush growth in algae and plants? In photosynthesis, it is carbon, oxygen and hydrogen plus sunlight energy that creates a chemical reaction to produce *glucose*, the real food source for algae, not phosphates. Phosphates, nitrogen and potash are the three primary elements of fertilizer - *research the facts.*

Nitrogen - stimulates stronger green growth;
Potassium - drought and disease resistance;
and
Phosphates - bud and root development.

POOLTEC®

3-in-1 Pool Water Treatment

- 1 - Prevents & kills green, yellow and black algae-fungus (kills green and yellow algae in 4 to 24 hours)
- 2 - Clarifies pool water ultra clear
- 3 - Boosts chlorine effectiveness up to 6x

Using Pooltec® 3-in-1 Pool Treatment during the swim season costs much less than expensive phosphate removers. Why starve when you can kill, prevent, clarify and boost chlorination affordably.

Note: 100 ppb of phosphate is equivalent to one tenth of a pound of phosphate (which is only a few ounces) in six (6) 20,000 gallon swimming pools or 1,000,000 million pounds of water - not much to stop algae growth!
